The Bicentennial and Centenary Trails pass through the National Arboretum.
The trees planted at the National Arboretum Canberra have been carefully selected by an expert panel for their conservation status, symbolic nature, aesthetic value and suitability for the site and climate. Many species were chosen from the International Union for Conservation of Nature's Red List of Threatened Species, others were chosen because they provide outstanding seasonal colour, have cultural significance and or provide habitat for Australian native wildlife. The forests are utilised for research, educational, conservation and recreational purposes with high conservation forests providing future seed banks.
